START A LIFETIME CAREER WITH 1 YEAR OF TRAINING.

4 years of college has been the traditional start of a career. But an uncertain career path combined with the burden of high student debt with can often result in an unpredictable future.

There is another way. Phillips Corporation, a global supplier of manufacturing technology products and services, has created a comprehensive course to train students as machine tool service technicians. Machine tools are essential in manufacturing and are used in virtually every product we use today. Service techs are in high demand and are vital to a manufacturing company’s success.

But that's just the beginning. An experienced service tech has many paths to new opportunities. See the chart below for possible career paths.

What will you learn?

- Operate & set-up CNC machine tools
- Fundamentals of CNC machine tool programming and control functions
- Motors, Generators and Transformers
- Electrical systems, electrical & electronic motor control systems
- Power and Control Electronics
- Advanced Motor Control Systems
- PLC’s Learning Systems and Troubleshooting
- Mechanical Systems and Drives
- Pneumatic and Hydraulic Systems
- Fundamental Metallurgy

If you’re looking for a new direction and a clear path for a long-term career, consider the Phillips University at Lehigh Career and Technical Institute.

10 months of training could provide you with skills for a lifetime. Discover your potential. Register now.
